ORIGINAL #19SA

VISCOSITY MODIFYING ADMIXTURE FOR CONCRETE WITH ACCELERATED SET

PRODUCT DESCRIPTION: Original #19SA is a multi-purpose admixture that combines the benefits of Original #19 viscosity modified stabilization along with calcium chloride based acceleration for improved setting time and strength gain in colder temperatures. Original #19SA also contains a plasticizing agent that disperses the cement particles, provides lubricity to the concrete, and allows a lowering of the water to cement ratio in wet or high slump mix designs.

BENEFITS AND FEATURES:

- **BLEED / SEGREGATION CONTROL:** Original #19SA decreases surface water bleeding and improves aggregate suspension due to its gelling action. The hydration water is held integrally in the mix (not pushed to the surface), resulting in concrete with reduced capillarity, improved workability and cohesiveness.

- **ACCELERATION:** Original #19SA contains calcium chloride for faster initial strength gain and compressive strength development in cold weather pours or whenever faster mold turnover time is required.

- **WATER REDUCTION:** Original #19SA allows from 5-10% water reduction depending on the dosage used. This provides higher end strengths with less surface defects, voids, or imperfections.

- **SHRINKAGE CONTROL:** Original #19SA stabilizes the concrete mix and therefore decreases shrinkage potential or surface cracking common in wet mixes or hot, windy weather environments

- **DECREASED PERMEABILITY:** Original #19SA provides a volume stabilized “closed cell” concrete structure that is less susceptible to water intrusion. This results in decreased surface damage from continuous freeze-thaw weather cycling and increased resistance to attack by deicing chemicals.

- **IMPROVED SURFACE APPEARANCE:** Original #19SA intensifies color shades in decorative mixes containing iron oxide colorants resulting in improved appearance; uniformity and easier mixer clean out. Streaking, shade variations, and efflorescence formation are reduced or eliminated.

- **WORKABILITY:** Original #19SA provides lubricating and improved finishing properties for better mix compaction with less surface defects

COMPOSITION: Viscosity modified admixture with added lubricant/troweling aids and chloride accelerants

LEED CREDIT CONSIDERATIONS: MR Credits 5.2: Regional materials- Greater than 20% extracted, processed and manufactured regionally at production location: Kankakee, Il. 60901. 90% Content Harvested within 500 miles.

TECHNICAL DATA Original #19SA is formulated to comply with ASTM C-494 Type C guidelines.

RECOMMENDED ADDITION RATES: Dosage of Original #19SA varies from 3-16 ounces per 100 lbs. of cement (196-1045 ml/100 kg) depending on the mixer type, mix design component levels, water to cement ratio, and additional admixture requirements.
RECOMMENDED ADDITION RATES (CONTINUED): A starting dosage of 3-4 ounces per 100 lbs. of cement (196-261 ml/100 kg) is suggested, with increasing amounts as needed to control surface bleed water. Specco recommends a trial mix be conducted with actual production materials in order to determine the optimum dosage for specific set time or strength requirements. Refer to Cautions Section for additional information.

DIRECTIONS FOR USE IN AUGER MIXERS: Original #19SA may be dispensed with automatic liquid dispensers, but will require dilution with water for proper flow consistency. Refer to Specco’s Admixture Tank Calibration Sheet for suggested dilution ratios.

DIRECTIONS FOR USE IN PADDLE, RIBBON, OR PAN STYLE MIXERS: Mix concrete with or without additional plasticizers or air entraining agents to the desired consistency (See Cautions Section below). Add the required amount of Original #19SA as needed to help bind excess bleed water in the mix, producing a creamy mix consistency. Add Original #19SA solution slowly to the mixer at the end of the mixing cycle (while agitating) to avoid higher air entrainment levels.

CAUTIONS: Original #19SA is compatible with most other admixture types; however they should always be added separately to the mix to avoid any possible chemical interaction. For example, air-entraining agents based on vinsol resin and superplasticizers based on naphthalene sulfonate are not compatible in the same admixture tank with Original #19SA however, they can be added separately if needed. Original #19SA is miscible (compatible) with additional chloride and non-chloride based accelerators, but these should also be added in separate admixture tanks if possible. Original #19SA contributes to air entrainment levels. Specco recommends that any separate air entraining agent additions to the concrete mix should be reduced at least 50% when using Original #19SA and the resulting mix should then be checked for accuracy to stay within the desired level.

NOTE: Due to the viscosity modifying characteristics of Original #19SA and the effects on water permeability, air entrainment levels measured by the standard pressure volume meter may not be accurate, and should be re-checked by weight difference interpolation versus a control or volumetrically. Avoid excessive vibration when using Original #19SA, which can decrease the resulting concrete air content and may generate increased surface defects or aggregate segregation, especially in precast related work. Keep from freezing. If frozen loosen cap, lid or bung and allow solution to thaw and mechanically agitate before using. The solution will be restored and can then be used. Do not use pressurized air for mixing or agitation. Original #19SA should be stirred before using if the material has set for an extended period (3-6 months).

GHS HAZARD RATINGS: WARNING:

IRRITANT: SKIN IRRITATION.

FIRST AID: Refer to product S.D.S. (Safety Data Sheet) for complete health and safety information before using this product. FOR MEDICAL EMERGENCIES ONLY – CALL INFOTRAC AT 800-535-5053.

H.M.I.S. CODES: HEALTH = 1, FLAMMABILITY= 0, REACTIVITY = 0, PERSONAL PROTECTION = C (GLOVES, GOGGLES, APRON)

SHIPPING NAME: Concrete Admixture - Water base - Not regulated.

SHIPPING CLASS: ITEM 33880, SUB 2, Freight Class 55.

PACKAGING: 5 gallon (18.9 L) pails, 55 gallon (208 L) drums, 265 gallon (1000 L) containers.

STORAGE: 40° to 90° F. Protect from freezing and excessive heat.

SHELF LIFE: 1 year properly stored

WARRANTY: Specco Industries Inc. (Specco) solely and expressly warrants that its products shall be free from defects in materials and workmanship for one (1) year from the date of purchase.
WARRANTY (CONTINUED): Unless authorized in writing by an officer of Specco, no other representations or statements made by Specco or its representatives, in writing or orally, shall alter this warranty. **SPECCO MAKES NO WARRANTIES, IMPLIED OR OTHERWISE, AS TO THE MERCHANTABILITY OR FITNESS FOR ORDINARY OR PARTICULAR PURPOSES OF ITS PRODUCTS AND EXCLUDES THE SAME.** If any Specco product fails to conform with this warranty, Specco will replace the product at no cost to Buyer. **Replacement of any product shall be the sole and exclusive remedy available and buyer shall have no claim for incidental or consequential damages.** Specco does not authorize anyone on its behalf to make any written or oral statements which in any way alter Specco’s installation information or instructions in its product literature or on its packaging labels. **Specco explicitly excludes any written or oral statements or implied warranty on the performance of an applied/installed product manufactured or sold by or through Specco.** Specco has no control over Specco application standards adherence, site conditions, atmospheric variations, installer/applicator skill level or the determination of the suitability of any Specco products for a specific intended purpose. Buyer shall be solely responsible for determining the suitability of Specco’s products for the Buyer’s intended purposes. Product demonstrations, if any, are done for illustrative purposes only and do not constitute a warranty or warranty alteration of any kind.
